- b. Claim 6 has been amended to read, "Process according to any of claims 1 to 3, characterized in that..."

Allowable Subject Matter

Claims 1-3 and 6-7 are allowed. The following statement of reasons for the indication of allowable subject matter:

The prior art considered individually and in combination, fail to teach or suggest performing a dynamic pressure measurement including measuring the frequency of a

pressure signal obtained from the dynamic pressure measurement such that the frequency is a function of mixing dynamics.

The following references are considered the most relevant. Begemann et al. (US 2004/0130049 A1) and Soechtic (US 4944599) disclose a RIM device comprising differential pressure transducers located upstream of the injectors. Both Begemann and Soechtic fail to teach using the frequency of the dynamic pressure measurement to detect a flow regime.

Hagen (US 2005/0056313) teaches the dynamic measurement of the differential pressure to control a reactor, however Hagen fails to teach or suggest the relationship of that pressure characteristic (i.e. frequency) to mixing. Furthermore Hagen does not teach or suggest using the frequency of the dynamic pressure measurement to set the frequency and amplitude of the stimulus, therefore, the pressure modulation as taught by Hagen is not a function of mixing dynamics.

The above reference considered individually, and in combination fail to teach the claimed limitations as stated in the above reasons for allowance.
